THE **ADVANTAGES...**

- ✓ BIODEGRADABLE
- ✓ REUSABLE
- ✓ RECYCLABLE
- ✓ COMPACT & LIGHTWEIGHT
- ✓ EASY HANDLING
- ✓ 6 CUSHION SIZES

WHAT IS OPUS MINI ?

Opus Mini is the only air cushion packaging system designed to operate specifically with biodegradable and recycled films.

The biodegradable cushions can be reused, recycled in the appropriate waste stream, or recycled through composting. Opus Mini recycled film uses post-consumer-waste plastic to minimize the amount of unsustainable virgin plastic being used and going to landfill.

With market-leading performance and a clear environmental benefit, we are helping companies to meet their packaging waste targets and reduce plastic pollution.

Whether your application is impact protection, void fill, wrapping or surface protection or you are looking for a more flexible alternative to small bubble film, we have a suitable film configuration for you.

Whether you are a large or small user, you are equally important to us. We have a range of delivery options available to make sure you are getting the product you want in the most cost effective manner for you.

TECHNICAL **SPECIFICATIONS...**
